Our Technique

Design: Openwork aluminium slats, angled for a 5 mm gap, allowing natural airflow while limiting direct exposure to wind.

Reduces direct visibility and acts as a privacy screen.

Top rail guide system with integrated brush seal, ensuring friction-free sliding. A stop at the end of the run stops the panels.

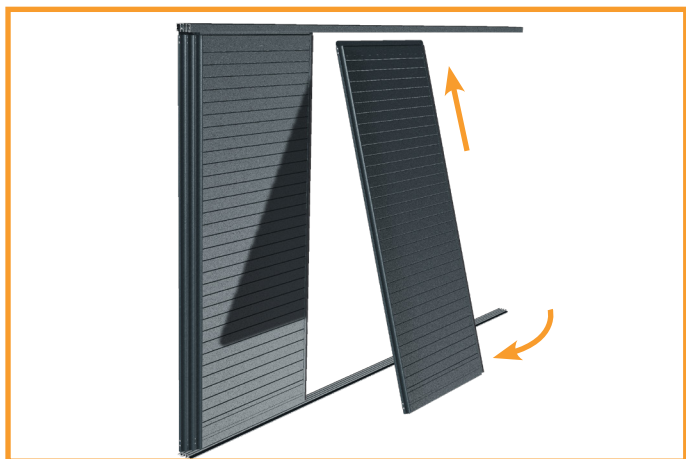

Aluminium structure with powder-coated finishes and customizable RAL color options, blending harmoniously into outdoor spaces.

Structure: Sliding panels mounted on a 4-groove track. The roller system at the bottom ensures precise sliding, suitable for outdoor applications.

Our Dimensions

This aluminium sliding curtain is part of a range of robust outdoor products, perfect for terrace applications where durability and aesthetics are essential.

Simplified panel installation with upper guide and stabilized support on the lower rail.

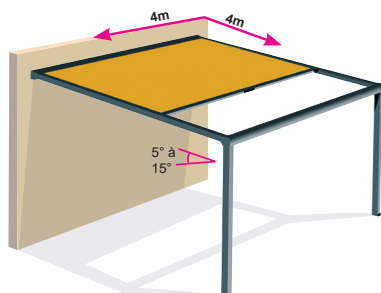

Adaptable to the desired configuration. Available in a 4-panel configuration for a maximum width of 4.5 m (Horizon 2 model) or in a 6-panel configuration for a maximum width of 6 m (Horizon 3 model).

Rail bearing equipped with needle rollers, offering 5 mm height adjustment for easy adjustment and quick, precise installation.
