Quelles toiles pour les screens ?

Le screen est occultant grâce au guidage latéral de la toile. Selon vos besoins et l'esthétique souhaitée, le choix de la toile sera différent. Outre l'apparence et le degré d'occultation souhaité, la résistance aux UV, à la déchirure, au feu sont autant de caractéristiques à comparer entre une toile micro-perforée ou acrylique.

Enfin, le coloris est également très important pour apporter une touche personnelle à votre extérieur.
